

Claims

What I claim as my invention is:

1. A device comprising:

A solar energy capture system incorporating a control system to power multicolored light emitters that is rotatable by air currents about one or more axis of the device.

A windmill, spinner, or mobile-like device containing a solar energy capture system to supply nighttime power to multicolored light emitters that are dynamically moved by air currents.

2. A Wind electric generator connected to a control and energy storage system to power multicolored light emitters that undergo movement with air currents or the wind.
